OBJECTIVE

Dynamic and result-driven **Cloud DevOps Engineer** with total 7+ years in which relevant **5+ years** of extensive experience crafting, securing, and enhancing AWS environments. Actively pursuing a technical role to apply expertise in **CI/CD, DevOps, Cloud Security** and **Cloud administration** fortifying critical deployments. Proficient in automating infrastructure, implementing robust security protocols, and seamlessly integrating multi-cloud activities. Very Eager to contribute software product development, innovative solutions, fostering collaboration across teams for streamlined operation for company growth.

PROFESSIONAL SUMMARY

- Collaborating with teams to build and deliver solutions implementing Virtualization, **IAAS** and **containerized architectures in AWS cloud** environments.
- Develop reusable and parameterized **IAAC** templates for automated deployment of **AWS resources** using **Terraform**.
- Responsible for **configuration** management, **release** management, **automatic/manual deployments** & troubleshooting.
- Server automation and configuration management using **Ansible**.
- Proficient in developing CI/CD Pipelines using **Jenkins**.
- Hands-on experience in implementing micro service-based applications architecture using containerization tools like **Docker** and container orchestration tools like **Kubernetes**.
- Solid experience with Windows (Windows server) and **Linux** (Ubuntu 18.04) administration.
- Writing various **scripts** mainly yml, groovy, terraform, shell and python.
- Install, configure, and manage tools within **the AWS, AZURE and GCP** cloud environment.
- AS a **SRE** focuses on delivery and stability of production environment.
- Strong knowledge of AWS S3

EXPERIENCE

1) Company: Foretell Technologies Pvt Ltd.

- **Designation:** Cloud DevOps Engineer
- **Duration:** January 2024 to Present
- **Projects:**

- **Vista Mart:** Vista Mart Ecommerce Platform

The objective of this project is to design and develop a comprehensive e-commerce platform that mirrors the core functionalities and user experience of Amazon. This platform will enable users to browse, purchase, and manage products across various categories, ensuring a seamless shopping experience. The project encompasses front-end and back-end development, user management, payment integration, and logistics support.

- **Roles and Responsibilities:**

- Creating, building and managing **CI/CD pipeline** by integrating various tools.
- Managed infrastructure automation using **Terraform**.
- Manage and maintain **Kubernetes clusters**, ensuring high availability and scalability and Monitor cluster health, troubleshoot issues, and optimize resource utilization.
- Implement CI/CD pipelines for containerized applications, enhancing automation and deployment speed.
- Design, build, and maintain Docker containers for microservices and applications.
- Deploy and manage cloud infrastructure using services like **AWS EC2, Azure VM, and GCP Compute Engine**.
- Develop **automation scripts** using **Python** to streamline cloud operations, monitoring, and deployment processes.
- Monitor application performance and reliability using tools like **Prometheus, Grafana**, or Cloud-native monitoring solutions.

- Collaborate with development teams to **integrate DevOps practices**, enhancing collaboration and reducing time-to-market

2) Company: Global Payments Inc. (TSYS Card Tech Services India)

- **Designation:** Cloud DevSecOps Engineer
- **Duration:** June 2023 to December 2023
- **Projects:**

- **PORTICO:** Heartland's Portico Gateway

This gateway exposes Heartland's primary API, which offers a broad set of transactions and features across multiple industry types. This gateway was built with security in mind and supports several different methods for encryption and tokenization of card data including E3 End-to-End encryption and secure submit tokenization with this reduce integration and certification time, fraud potentials and ensure proper interchange rates.

- **Roles and Responsibilities:**

- Responsible for deploying, managing and designing architecture for various Java based applications on **AWS cloud** and **AWS cloud security**.
- Design, implement, and maintain Infrastructure as a code using **Terraform**.
- Collaborate with **product development** and operation teams to ensure **IaC** best practice are followed.
- Ensuring **infrastructure** scalability, performance, and security.
- Develop Terraform modules to provision and manage **AWS resources**, including VPC, Subnets, Dynamo DB, ECS, ECR, EKS, Code deployment, EC2 instances, S3 buckets, RDS databases, and SQS.
- Automate routine tasks to enhance operational security effectively.
- Work closely with cross-functional teams, **Product owner/manager**, stack-holders, domain risk assessment, to understand infrastructure requirements and cloud security
- Effective communication to ensure alignment between infrastructure and application needs.
- Implement **security best practices** in Terraform configurations.
- Ensure the **compliance with organizational and industry security standards**.
- Create and maintain documentation for Terraform configuration, processes, and procedures.

3) Company: ArsysTechno Consulting Pvt Ltd, Pune

- **Designation:** Devops Engineer
- **Duration:** August 2021 to June 2023
- **Projects:**

- **GNA:** Healthcare advocates website

Designed, implemented, and deployed **HIPPA compliant AWS architecture** for **healthcare** based NodeJS and ReactJS web application to secure & protect the user's personal health information (**PHI**). Enable encryption on Backend servers and **Postgres DB** using **AWS KMS**. Writting Ansible script for provisioning, configuring and managing the AWS cloud services. Also, automate the deployment process using Jenkins.

- **Roles and Responsibilities:**

- Responsible for deploying, managing and designing architecture for various **Java based** applications on **AWS cloud**.
- Deployment and configuration of AWS services such as **EC2, RDS, S3, and terraform** for the migration project
- Actively managing, configuring and monitoring various AWS services like **EC2, AMI, S3, VPC, Route53, API Gateway, SNS, SES, ECS, Cloud Watch, RDS, Load balancing, Auto scaling, ECR, EKS, IAM** and Building **highly scalable** and cost **effective solutions**..
- Creating, building and managing **CI/CD pipeline** by integrating various tools.
- Implementing master-slave architecture to improve the performance of **Jenkins**.
- Orchestrated deployments using Helm charts and Kubernetes manifests for seamless rollouts and rollbacks.
- Configure automated **alerts/ alarms** and act on any outages/ incidents.
- Worked in the **agile methodologies** with 2 week sprint cycle, used **JIRA** as project Management of **SDLC**.
- Manage A/B testing pipelines for optimizing search and recommendation **models**.
- Writing **yml, groovy and terraform scripts** as per requirements.
- Developed **Bash scripts** to automate the provisioning and configuration of Azure resources,

reducing setup time and ensuring consistency.

- Implemented **CI/CD pipelines**, integrating scripts to automate build, test, and deployment processes, thereby minimizing manual intervention.

4) Company: ASM Enterprise solution Pvt Ltd, Bangalore

- **Designation:** Devops Engineer

- **Duration:** Feb 2020 to May 2021

- **Project:**

- **JDMS:** Jio document management system

This is a web application, Jio document management system (JDMS) mainly handle the document system which is fully automated and robust management system. This helps mainly used to capture and store various electronic documents files. It also provides document security, auditing trails, access control, centralized storage, streamlined search and retrieval.

- **Roles and Responsibilities:**

- Managed and configured AWS Services as per the business needs (**ELB, EC2, S3, Auto Scaling, IAM, RDS, and VPC**).
- Created **Cloud watch alarms** and **events** using various metrics for monitoring the AWS services performance such as CPU utilization, Disk utilization, Network performance, etc.
- Worked on some Linux flavor (**Ubuntu 18.04, Red Hat 7.5**).
- Installed, Configured, and managed various Devops tools on the Linux system. (Git, Maven, Nexus, Jenkins, Nagios, and Ansible.)
- **Container** management using **Docker** by writing **Docker files** and deployed into **Kubernetes** pods.
- Enabled application and server monitoring using Nagios and **Cloud watch**.
- Provided Web Server Support (Apache2 and Tomcat).

5) Company: Swarish Technology Pvt Ltd, Pune

- **Designation:** Devops Associate

- **Duration:** Aug -2017 to Feb-2020

- **Project :**

- **WMS:** Warehouse management system

Warehouse management system (WMS) is a web application designed to support warehouse or distribution center management staff. This is fully automated configured web application timely provide customer service and communication link between customer and supplier and correctly minimized total physical efforts, cost, other resources etc.

- **Roles and Responsibilities:**

- Systems and Network related issues like Configuration and Troubleshooting on Linux server.
- Manage and Configure **AWS services** as per business requirements.
- Troubleshoot all hardware and software related issues.
- Creating **CI/CD pipelines** by integrating GitHub, Maven, Jenkins, and Ansible.
- Creating and Managing **Docker** containers /custom Docker images.

EDUCATIONAL QUALIFICATION

- **Bachelor of Engineering** in Information Technology from Nagpur University in 2017.

CERTIFICATIONS & ACCOMPLISHMENTS

- I was awarded for the best performer of the year at **Swarish Technology Pvt Ltd.** in 2019, for multiple project releases and infrastructure deployments.
- **AWS Certified Solution Architect - Associate**
Validation ID: EYZ1685JFEE4Q5GT
Validate at: <http://aws.amazon.com/verification>
- **Certified Kubernetes Administrator (CKA)**
Certification ID: LF-i5x86nknm7
Validate at: <https://training.linuxfoundation.org/certification/verify/>
- **HashiCorp Certified Terraform - Associate (002)**
Validate at: [Terraform-Associate-certi](#)

Declaration

- I hereby declare that the above-mentioned information is correct up to my knowledge and I bear the responsibility for the correctness of the above-mentioned particulars.
